

SERVICE UPDATES

It's easy to manually check for any disruptions.

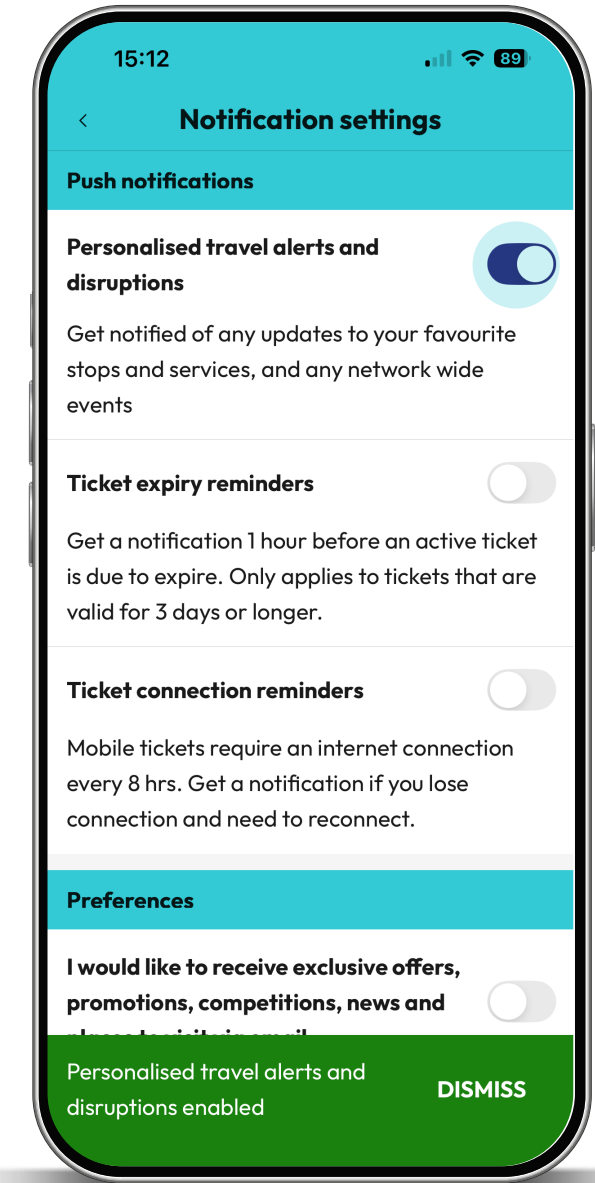

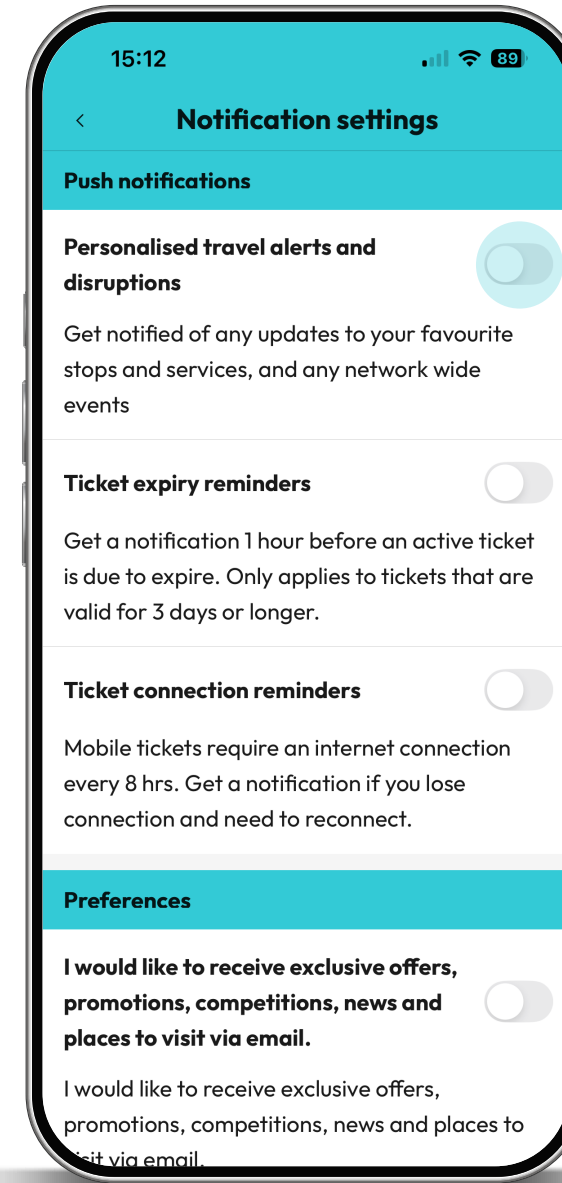

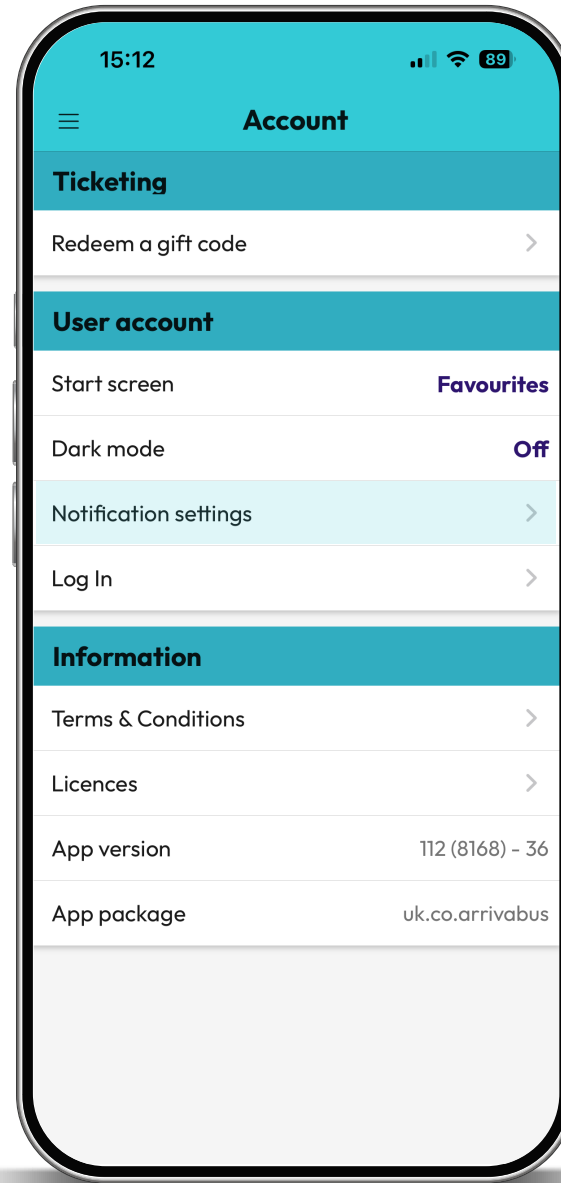

- Go to "Timetables".
- Click on your zone of travel or search directly for your route or location in the bar at the top.
- If there's a disruption, you'll see the service update marked with a warning symbol - just tap to view the update.
- When you open the timetable, a ⚠ symbol will also appear in the top-right corner if that service is affected by a disruption.
- Or just open "Service Updates" from the main menu to check updates for your route. This will take you to the Arriva Bus website. From here navigate to the area you wish to travel.

You can choose to receive alerts whenever there's disruption affecting your usual services or stops.

You can do this by turning on notifications. You'll need to create an account or log in to do this.

- From the app's main menu select **"Account"** and then **"Notification settings"**.
- Turn on **"Personalised travel alerts and disruptions"**.
- Once this is on you'll receive updates about your favourite stops or services.

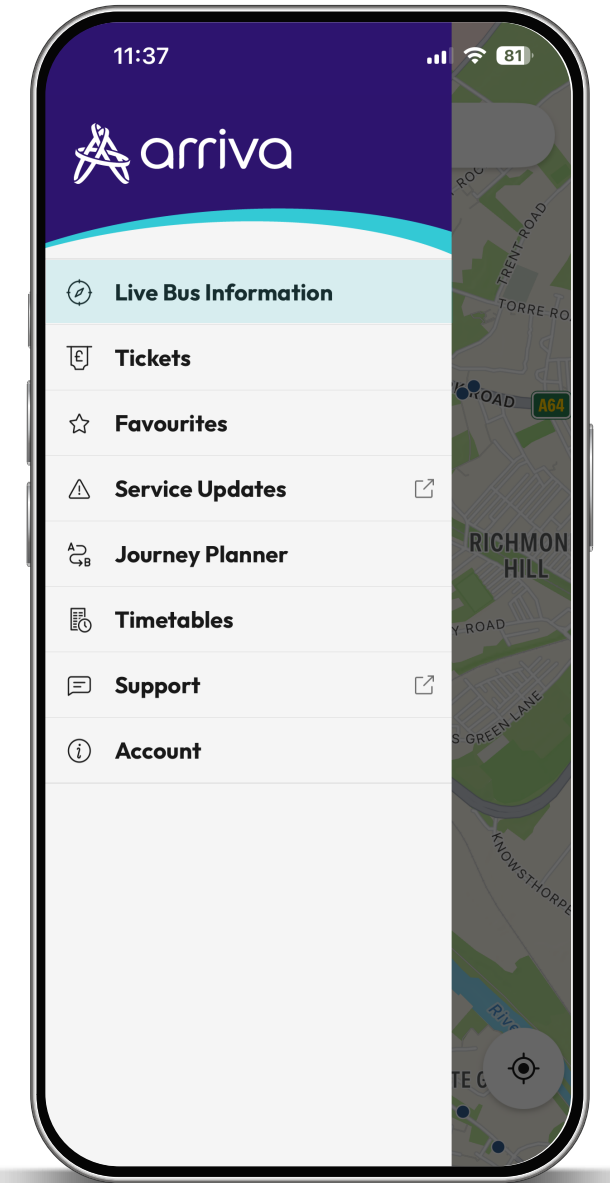

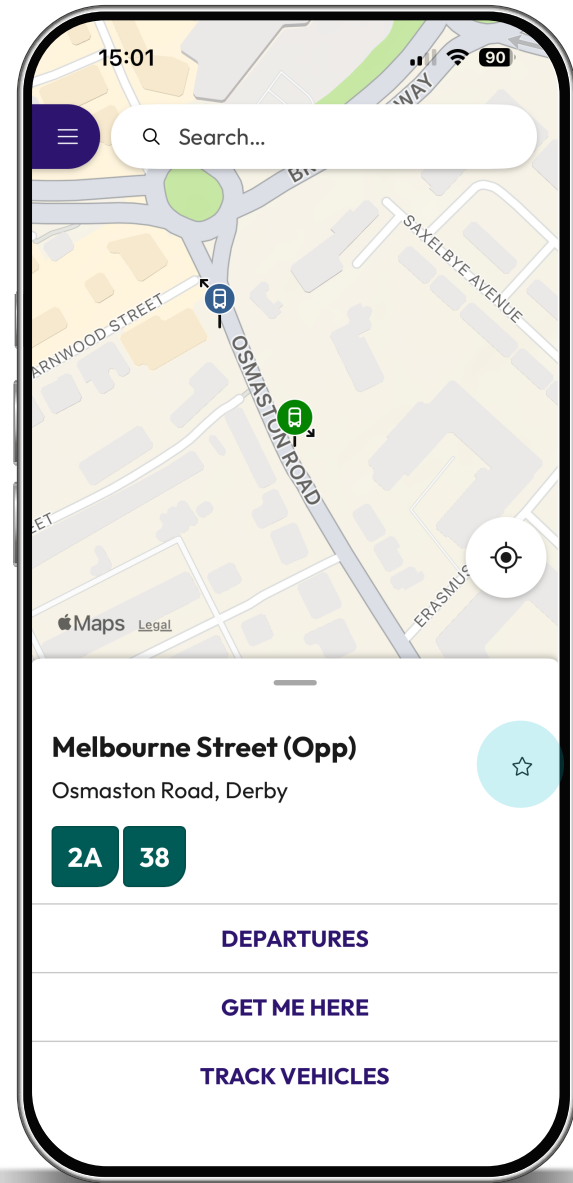

You can favourite stops and timetables when you see the ☆ icon.

- If you favourite a bus stop, you'll receive alerts for that stop.

If multiple buses operate from that stop, you'll get notifications for all of those services.

- If you favourite a timetable, you'll receive updates specific to that particular service. You can do this from when you're viewing a timetable or from the live bus departures screen.

- Click on "Live Bus Information".

- Tap the **settings icon**.
- Use the search bar at the top to enter your route number or destination.
- Choose your route from the list, tap the star icon, then select Done.
